

ADPH Develops COVID-19 Risk Indicator Dashboard

A color-coded health guidance system has been developed by the State of Alabama to guide health behaviors for individuals and businesses. Categories: Very High (red), High (orange), Moderate (yellow), and Low (green) indicate the risk of spread in the community. Each level of the dial is guided by a rigorous measurement system which can be different by county.

High-risk individuals in the red risk category, including older adults and those who are immunocompromised, should continue to follow stricter protocols, and exercise all possible caution. Individuals who work or live with persons in high-risk categories should also continue following stricter guidance.

Small Business COVID-19

Grant Program Available

This week, Governor Ivey announced the Revive Alabama grant program to support small businesses, including physician practices, in Alabama that have been impacted by COVID-19. The program will reimburse practices for expenses they have incurred due to interruptions in business activity caused by the pandemic.

Practices that qualify as small businesses may receive up to \$15,000 to reimburse expenses as a result of the pandemic. However, there are several factors that will determine the eligibility of a practice.

**Alabama coronavirus deaths
reach new highs**

The Alabama Department of Public Health reported 40 new coronavirus deaths in the state on Tuesday, the most ever in a day. 1,136 people have died of the virus in Alabama since March, 210 of them in July. The 7-day average for deaths in the state is 18.4 per day, a new record.

The previous high for average deaths was 16.4, a number Alabama hit twice in late April. Since mid-May, the state's 7-day average for deaths hadn't climbed past 15 per day until recently. The 40 deaths reported on Tuesday pushed the average up to the new high.
